

Learn laviera!

Welcome to learn laviera

Volume 3!

**This addition will
introduce you to new
concepts for laviera.**

Welcome to the third edition of learn laviera!

Laviera is a constructed language created for creative expression and communication. It features its own phonetic system, grammar rules, and vocabulary, offering a unique and captivating way to express ideas and emotions.

Laviera is designed to be consistent and expressive, enabling users to create meaningful words and sentences using its distinct linguistic structure.

Laviera includes

- Unique phonetic systems
- Grammar rules for sentence construction
- Special vocabulary tailored for Laviera and it's dialects
 - Consistency and expressiveness

Opportunity for linguistic exploration and creativity

Laviera since being a constructed language might seem hard to learn.

That is half the case, it's only hard to learn if you don't put time and effort into learning laviera or one of it's dialects, yes laviera has dialects but some of them wont work with others, yeah you can learn both but I would recommend learning one of the dialects at a time so that you can understand the alphabet and language requirements.

The next page explains some key things about laviera so you should read that before skipping around the pages!

Before we get started, I want to put some information out there about this paper.
Laviera is a language that has been in the works since January of 2023.
It is not perfect and has a lot of problems associated with it.
Lets get started!

With laviera, you have the normal alphabet.

a('ay')
b('bs')
c('see')
d('du')
e('eh')
f('fr')
g('ge')
h('hn')
i('ie')
j('ya')
k('har')
l('leh')
m('meh')
n('ne')
o('ohe')
p('pu')
q('cue')
r('rue')
s('see')
t('tra')
u('we')
v('va')
w('vik')
x('xsh')
y('vi')
z('cha')

Kind of weird right?

There is another one aswell.

Laviera includes dialects, places where the original can't be spoken.

Say a speech impediment or a learning curve.

There are 2 dialects, mainland which is the original one, and Catlick.

Catlick is a play on words for catholic.

Catlick includes noticeable changes to the phonetics as the people who speak it have a hard time trying to say certain letters.

The people in question are human/cat hybrids who have been on the earth for around the same time as humans.

They have a hard time making sounds like, T, C or K.

Here is a demonstration on the problems.

When one of them would say the word cancer, it would come out as chancer.

This is a big problem when they try to speak English for example as English uses a lot of these sounds for words.

On the next page, the dictionary goes as follows

A-ya
B-se
C-leh
D-ru
E-eh
F-fe
G-ge
H-he
I-ia
J-ye
K-lar
L-leh
M-meh
N-na
O-ohe
P-pa
Q-hu
R-reh
S-see
T-ra
U-ve
V-va
W-wa
X-ke
Y-yoh
Z-sha

If you try to say any of these, most of them won't need plosives as they are using the combination of the mouth and the nose to make some of the sounds.

I can't list the dictionary in this document as it contains over 475 thousand words and would require around 7 ink cartridge changes for a laserjet pro m12w.

You can visit the dictionary at <https://newagegalactic.github.io>

That's where you can view the dictionary in whole.

It might take some time to learn laviera and its dialects.

But before we move on to the next page, please keep one thing in mind.
don't mix and match the letters in the dialects, you don't want to be aiming for a new dialect already.

Leave that for me to do as I have more experience.

Alright, now onto the next page.

If you take one of the dialects alphabet and make a word with it, the word would most likely have double letters repeating
Somewhere in the word.

Around march of 2023 replacements were added for letters that would repeat twice next to each other.

Take ball for example, using the catlick dictionary, it would be spelt like this sey-alehleh.

But with the double words it instead is, seyala'h. it's said "seh lar".

I would list the dictionary for the double letters for both dialects here in this document but I want to save the page numbers and your eyes.

If you would like more information or would like to read a short story written in mainland, you can go to NewAgeGalactic.github.io

And using the buttons at the top of the page!

Side note that as of writing this around the 08/14/2023 I am not able to speak in any of the dialects, it takes time to learn a new language and I think this one is a bit harder with what I have to do and learn.

Laviera is great and amazing, but it does have its downsides.

Some of the words do sound like its English before it became the one we know today.

While pronunciation of the words formed from this booklet may be confusing at first, keep trying.

If you have any problems or wish to chat with someone who is me or knows about laviera, just ask around.

Hopfully the one that gave you this booklet is me, the creator. Or is someone who knows me.

It should only take you around 5 to 6 months of learning laviera or one of it's dialects to be proficient at it!

Have a great time reading in laviera, and speaking it aswell!
